RETENTIO

Customer CSV Template Guide

Prepare customer data for churn-risk prediction

Use this guide to prepare a customer CSV before uploading it to Retentio's Predict page. The sample records are illustrative only, not real customer data.

1. Required CSV headers

Keep the spelling and capitalization exactly as shown. Each customer occupies one row.

```
name,customerID,gender,SeniorCitizen,Partner,Dependents,tenure,PhoneService,MultipleLines,InternetService,OnlineSecurity,Online
Backup,DeviceProtection,TechSupport,StreamingTV,StreamingMovies,Contract,PaperlessBilling,PaymentMethod,MonthlyCharges,TotalCha
rges
```

2. Example customer records

This compact preview demonstrates the format. It is not the complete 21-column table; the complete header row is provided above.

name	customerID	gender	tenure	InternetService	Contract	MonthlyCharges
Aarav Sharma	RT200001	Male	12	Fiber optic	Month-to-month	85.50
Priya Nair	RT200002	Female	48	DSL	One year	65.25

3. Formatting rules

- **File type:** Save as .csv (comma-separated values), not .docx or .pdf.
- **Customer identity:** Give every row a unique customerID. The name field is for display and identification.
- **SeniorCitizen:** Use 0 or 1.
- **Yes/No fields:** Use the exact categories expected by the backend.
- **InternetService:** Common values: DSL, Fiber optic, No.
- **Contract:** Common values: Month-to-month, One year, Two year.
- **PaymentMethod:** Common values: Electronic check, Mailed check, Bank transfer (automatic), Credit card (automatic).
- **Numeric fields:** tenure, MonthlyCharges, and TotalCharges should be numeric; avoid currency symbols.
- **Churn:** Do not add a Churn target column unless the deployed prediction endpoint explicitly requires it.

4. Before uploading

- Include the header row once, at the top of the CSV.
- Keep the same columns for every customer row.
- Remove blank rows and duplicate customer IDs.
- Verify accepted categories against Retentio's deployed backend preprocessing rules.
- Upload the .csv file on the Predict page. This .docx is a guide, not an upload file.

Important: The deployed Retentio backend schema and preprocessing code are authoritative. If the feature list or accepted categories differ, follow the backend's requirements.
